End of Worksheet					

### **Column descriptions for data on list of infested waters worksheet:**

**Water body name:** The name of the listed water body, if known. Lake names are listed without the word "lake". Water bodies that are "unnamed" are followed by additional location information. Where applicable, listings for the Mississippi River, St. Croix River, and St. Louis River include all waters defined as Minnesota-Wisconsin

**County or counties:** The county or counties in which the water body occurs. A lake in more than one county may be listed only under the county corresponding to its DOW number, but the entire lake is considered infested. Lake Superior and portions of rivers that flow through more than one county are listed in "Multiple" counties.

**Listed for aquatic invasive species:** The aquatic invasive species with which the water body is listed as infested.\*

**Year listed as infested:** The year in which the water body was first added to the infested waters list. Water bodies dated 1995 were included on a "List of Contaminated Waters". From 1996-2007 water bodies were listed as "infested" through rulemaking. From 2007-2014 the DNR listed waters as infested by Commissioner's Order.

Since August 2014 the online infested waters list has been the official, updated list, and water bodies were listed

**Year species was first confirmed, or connected water body:** Either (1) the year in which we first confirmed a population of the aquatic invasive species in the water body, or (2) "connected" to indicate that we listed the water body because it is connected to a water body where the aquatic invasive species has been confirmed; this column may also contain the name and/or DOW number of the connected, confirmed water body.

**DOW number:** An identifying number for lakes. DOW stands for the former DNR Division of Waters. Ponds and wetlands that are not on the public waters inventory are listed with "none" in the number column. Most rivers and streams on the public waters inventory are listed as "NA" in the number column; some river pools are identified with a DOW number.

\* We list a water body as infested if it contains, or is connected to a water body that contains, the following

bighead carp

Brazilian waterweed

brittle naiad

Eurasian watermilfoil

faucet snail

flowering rush

grass carp

New Zealand mud snail

red swamp crayfish

round goby

ruffe

silver carp

spiny waterflea

starry stonewort

viral hemorrhagic septicemia (VHS)

white perch

zebra mussel
